EDUCATION

McMaster University

Honours Mathematics and Computer Science (B.Sc.)

Sept 2022 - Present (Exp. Dec 2027)

Hamilton, ON

- **Related Courses:** Software Development, Data Structures & Algorithms, Natural Language Processing, Numerical Linear Algebra, Mathematical Modeling, Databases, Computer Architecture

EXPERIENCE

Data Engineer Intern

Kroll

June 2026 - Aug 2026

Toronto, ON

- Surfaced data coverage gaps across **thousands of enterprise clients** in **Databricks Gold-layer** datasets by designing a master data catalog that integrates Databricks, Dynamics, and D&B data.
- Improved **compute cost visibility** by building **Databricks/Azure** dashboards that monitor usage across running workloads and flag infrastructure optimization opportunities.

Software Engineer Intern

LTV.ai

September 2025 - May 2026

Toronto, ON

- Drove **\$3M+ ARR in enterprise revenue** by building a self-serve analytics feature that replaced manual SQL reporting, letting customers query revenue and campaign metrics on their own.
- Cut dashboard load times from **30 minutes to seconds** across **1.1B+ rows of event data** by redesigning analytics pipelines and query patterns.
- Increased **AI-driven** email generation and delivery throughput by **400%** by optimizing the LLM inference pipeline and adding caching, improving reliability and lowering operational costs.

Software Engineer Volunteer

McMaster Start Coding

June 2025 - Present

Hamilton, ON

- Developed **compilation and compilation error handling** for the Stabl.Rocks IDE, giving **80,000+** students feedback on their code across workshops and university coursework.
- Removed deprecated features and **26% of code identified as unused** while developing custom **Haskell** plugins for MSC's multisite platform and core course workflows.

PROJECTS

LavaLock - DeltaHacks XII | 🔒 | 🔑 | Swift, Go, C++, AWS, PostgreSQL

- Won the **Apple Swift Student Challenge** by building a **lava lamp-powered MFA** and **password vault** that draws randomness from physical entropy.
- Built a native **SwiftUI** app with **Keychain** storage and cryptographic password generation seeded from entropy.
- Created a **Go/C++** entropy pipeline on **AWS S3/EC2** that collects and serves randomness from lava lamp imagery.

TeX-it - HackThe6ix 2025 | 🔒 | 🔑 | Electron, React, Typescript, Go

- Built a desktop **LaTeX IDE** with real-time editing, rendering, and synchronized document state.
- Achieved **96% accuracy** on compile-ready LaTeX output by developing AI pipelines that convert **voice, image, and text** inputs.
- Built validation and feedback systems that ensure **compile-safe LaTeX** output and improve editor usability.

MacPad - Native MacOS Text Editor | 🔒 | Swift, Javascript, UI/UX

- Built **MacPad**, a native macOS text editor in **Swift** with inline **AI-powered writing** assistance.
- Implemented **multi-language text encoding** support so the editor can open and save text across languages.

TECHNICAL SKILLS

Languages: Python, Go (Golang), C++, JavaScript, TypeScript, Swift, SQL, Haskell, Bash

Frameworks & Tools: Next.js, Node.js, Flask, Angular, REST APIs, Git, GitHub Actions, Docker, Terraform, AWS, Xcode, Jira

Data & ML: PostgreSQL, DynamoDB, Redis, ClickHouse, Kafka, Databricks, Azure, TensorFlow, PyTorch, pandas, scikit-learn, NumPy, OpenCV, Snowflake

AI & Developer Tooling: Claude Code, Cursor, Co-Pilot, LLMops, Grafana
